

There is a lot of noise about cybersecurity. Find the signal.

Corporations are under daily threat of cyber attack. Once the purview of back office or IT staff, technical cybersecurity issues are now a standing topic at board meetings. Executives and officers are keenly aware of their responsibility to protect corporate, customer, and partner information. Unfortunately, this awareness alone hasn't slowed the pace of attacks and data breaches.

Cypient is a strategic advisory and technology innovation firm assisting companies in understanding the relationship between cybersecurity and business risk. We work with directors, officers, and executives to improve cybersecurity program oversight and transparency. Cypient provides its clients with extensive expertise in cybersecurity technologies, standards, and best practices.

Directors and Corporate Officers

Directors and corporate officers understand how to analyze and address business risk. Cypient provides companies with the tools and methodologies to connect cybersecurity risk to business risk. We help:

- Identify and prioritize cybersecurity risk
- Improve cybersecurity program oversight and efficiency
- Analyze the value of cybersecurity investments
- Implement industry standards and best practices
- Ensure due care in protecting corporate, employee, customer, and partner information
- Manage breach response

Technology Executives

Cypient supports chief technology, information, risk, and security officers throughout the analysis, procurement, and deployment of cybersecurity technologies. Cypient helps to protect cybersecurity investments by ensuring that new technologies compliment, and enhance the value of, your existing infrastructure. We provide:

- Requirements definition
- Technology analysis and selection
- Deployment and integration planning and oversight
- Cybersecurity program metrics and maturity analysis

Why Cypient?

Cypient is led by Nate Lesser, the former deputy director of the National Cybersecurity Center of Excellence, the cybersecurity national lab at the National Institute of Standards and Technology. At the nexus of technology, business, and government policy, Cypient and its network of affiliate experts provide clients with the range of specialized experience to handle the most demanding, complex cybersecurity challenges.

Cypient's areas of expertise, include:

- Implementation of cybersecurity standards and best practices
- Strategic planning and oversight
- Technology evaluation
- Penetration testing and forensics
